

■ AUTONOMOUS PHASE SEPARATOR

AUTONOMOUS

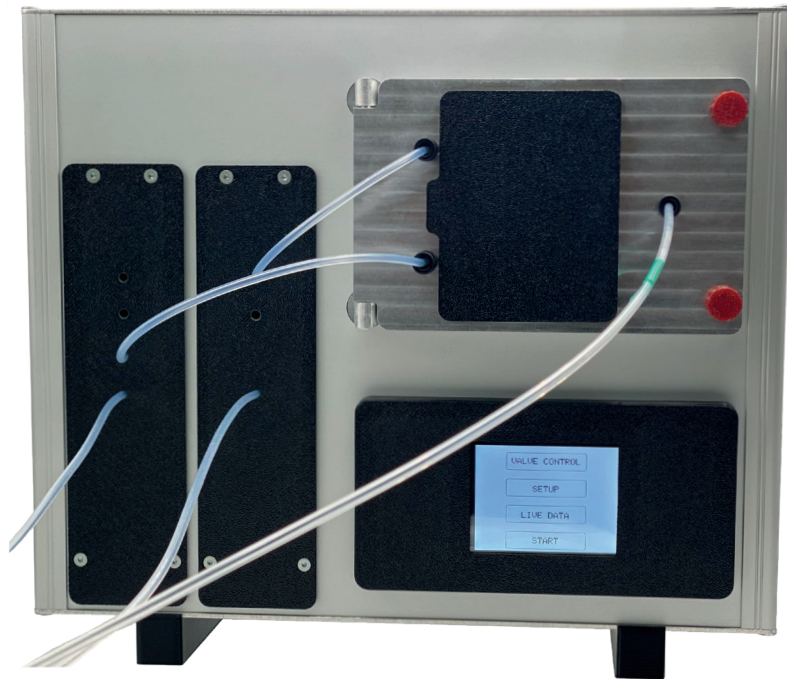

UNIVERSAL

SCALABLE

STAND ALONE

Little Things Factory's Next Generation Phase Separator is fully automated, which ensures a continuous separation even under different conditions. In addition, the system is not limited to liquid substances, it also allows the separation of mixtures of liquid and gaseous substances. In particular, the automated procedure offers the user enormous flexibility.

- An autonomous in-system phase separation for microfluidic systems
- Useful for continuous extraction systems, even in a cascade
- Phase separation even with dynamic flow rates
- Not restricted to aqueous systems and systems with water as the denser phase
- Phase separation for reactions and sequencing of multistep synthesis in closed systems
